DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 23 September 2008, with respect to the rejection(s) of claim(s) 3-5, 9-11, 15-17, 19, 21, and 23-29 under 35 U.S.C. 102(e) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Eyal et al. (6,229,046).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 3-5, 9-11, 15-17, 19, 21, and 23-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blank et al. (5,045,322) in view of Eyal et al. (6,229,046).

4. Blank discloses all aspects of the claimed invention with the exception of the non-acidic compound being a cyclic lactide. Blank discloses a superabsorbent material comprising a superabsorbent polymer, as described in column 1, lines 15-22. The superabsorbent material contains an antimicrobial agent to control odors, as disclosed in column 1, lines 15-22. The antimicrobial agent homogeneously mixed with the superabsorbent material, and is present in the amount of 5-10% by weight, as disclosed in column 8, Examples I and II. The superabsorbent material is for use in hygiene products such as diapers and sanitary napkins, as disclosed in column 7, lines 61-64.

5. Eyal teaches the use of lactides, which are a cyclic lactide, as an antimicrobial agent, as disclosed in column 5, lines 59-60. It would therefore be obvious to one of ordinary skill in the art at the time of invention to provide the superabsorbent material of Blank with lactide, as taught by Eyal, to provide the predictable result of imparting antimicrobial properties to the superabsorbent material.
